

**Data Structures Lab(CS111), B.Tech 2nd Semester Total  
Marks: 20**

**Instructions:**

1. This assignment is for evaluation and marks will be awarded. You need to complete execution by 3:30 PM.
2. Save the results (code file, screenshots of the compiled output) in a folder. The name of the folder should be given as Roll number\_lab group number\_EA1.
3. The folder has to be submitted through a Google form, which will be shared by the Teaching Assistant.
4. Any kind of malpractice will be penalized.
5. Zero marks for No submission/ Absentee.

---

**Q1:** Given a linked list, write a program to arrange the linked list elements such that the nodes having odd values come first followed by nodes having even values.

**Input linked list:** 5->2->7->9->4

**Output linked list:** 5->7->9->2->4

**Q2:** Given a list of integers, write a program in C to check whether each successive pair of elements have same parity or not. A pair of numbers have same parity if either both are even or both are odd.

**Input:** [ 4, 5, 7, 8 , 11,10, 5, 6, 20]

**Output:** Pairs with same parity are (5, 7), (6, 20).
